* **Premier or Photoshop CS (long version):**
** The earlier version of Photoshop, called Premier, is designed for multimedia producers and offers some editing tools and programs better for video than the newer version. It also features a learning curve that is harder than the later software, which was designed for users

who start editing regularly.

Photoshop CS has a long name since it's now a 2.0 version, and 2.0 is an alphanumeric number.

The most current version is Creative Suite (CS) 3.0. *

Creative Suite: This Photoshop program is designed to work with other Adobe programs for animation, illustration, graphics, and so on. It covers photography, video, and art and design. * * * #

Working with the Timeline feature The Photoshop Timeline option enables you to set a series of events for a photo. You can use multiple tracks, which have a time attribute that you can modify to cut or paste events. You can also use effects, such as distort and blur, and you can use the Background feature to place an image or layer behind the one you're editing. You can add

frames to single layers, and you can move, copy, and edit frames. You can also clone a frame or color layer, which creates a copy of the frame or layer. Photoshop also includes a drawing feature that enables you to produce line art with inked lines. (See the section "Drawing on the Timeline," later in this chapter, for more information.) You access the Timeline option by choosing

Edit⇒Timeline, or pressing T on the keyboard. This command displays the Events panel on the left side of the window. You can then select and move frames, make clones, and add any of the other tools from the Tools and Presets panel. Figure 4-1 shows the Events panel, with the Timeline option selected. **Figure 4-1:** The Events panel displays multiple timeline

events. Image © Andrzej Bilinkiewicz; courtesy of FreeDigitalPhotos.net You can also edit a photo or video directly in the main window. In the Windows task bar, click the Live Edit icon to display the image window. You can use the cursor to move around the image window, but not resize it like you can in the Events panel. After using the Events panel, click the Select All

option in the top-right corner of the main window, and click the Edit icon. The image window

editing tool. With the right tutorials you can learn to do a variety of different things, and you can use them to create your own custom images and designs. This is a beginner's Guide to Photoshop. REACH study data from 11 European centres reveal current medical treatment of methanol poisoning. Methanol is a common and increasingly used

industrial chemical that causes a wide spectrum of clinical symptoms. About half of methanol exposures result in mild and transient symptoms, most frequently with gastrointestinal and neuro-psychological manifestations. The remaining exposures (mostly occupational exposures in Europe) are usually associated with profound clinical manifestations of

methanol toxicity, such as metabolic acidosis, central nervous system (CNS) depression, and hepatic dysfunction, and require hospitalization. In severe cases, methanol poisoning can be fatal. Treatment of methanol poisoning is mainly symptomatic and relies on water-electrolyte correction and symptomatic treatments. Adjunctive therapies, although

extensively studied in single case studies, are mainly based on animal data and show conflicting results. The purpose of this study was to describe patterns of methanol poisoning in Europe. A multicentric, retrospective case series was established in 11 European centres. Potential methanol-related intoxications were identified from the hospital admission's electronic patient

records, and the physician was contacted for a clinical evaluation and data collection. Cases were classified according to the European Centre for Disease Prevention and Control (ECDC) criteria. Eight hundred and seventy cases of methanol poisonings (mean age: 38 years, 76.8% male) were included. These poisonings were confirmed (mainly by high methanol blood levels) to be

related to methanol in 1,149 (84.2%) cases, mainly in Europe (705 cases). The estimated incidence of methanol intoxication in Europe was 30 per million person-years, with similar or slightly higher incidences in men and women. Two hundred and thirty-nine (22.3%) cases were non-occupational exposures, mainly by alcohol consumption. Adjunctive

treatments included gastric lavage (60.9%), hypertonic/hyperglycaemic saline solution (12.1%), anti-metabolite or insulin treatment (10.5%), and hemodialysis (10.0%). The principal outcome was discharge from the hospital without sequelae. The role of the adrenal cortex in the activation of ACTH-releasing factor during suckling in the rat. The role of the adrenal

cortex in the activation of CRF during the establishment of a suckling response in the rat was investigated. After ACTH-4-9 infusions, plasma corticosterone levels (me
