If you think Photoshop's UI is a bit confusing, you're not alone. The only reason I use Photoshop is that it's the best tool out there. The interface is quite daunting for an amateur. If you're an image editor you're in luck, however! Elements simplifies that process a lot. You will probably use Photoshop Elements less often, as a photo editor, than traditional Photoshop. But if you're a graphic designer or web designer or illustrator that uses Photoshop Elements, you're in luck as well. I teach designers and photographers how to create graphics in Photoshop and websites and I tell you that 90% of what they need to do can be done in Photoshop Elements. Many web designers don't understand that Photoshop Elements gives them many of the same tools as Photoshop, but they are much easier to use. I also find Elements to be easier than Photoshop, but I have fewer complaints about it than many other people. For instance, I often use Elements to convert images from RAW to JPG or TIF. In some cases, it's easier for me to create a file from scratch using Elements than to convert an existing file using Photoshop. But that's just my personal preference. Just like Photoshop, Elements comes in paid and free versions. I'll cover both versions. You'll notice that I tend to refer to the paid version as Photoshop Classic (not Photoshop Classic Pro), and to the free version as Photoshop Elements. So How Does Photoshop Elements Work? When you first open an image, an "image viewer" appears at the left side of the screen. You can access the image viewer from the default "File" tab at the top of the Elements interface. Left: Original Photo Right: PhotoViewer in Photoshop Elements There are three sides to the image viewer: the left side shows previews of the image, the bottom shows a navigation panel with layers, and the right side shows a navigation panel with tools. Left: Layers; Right: File→Transparency panel Click the left button to display the preview area in the image viewer to the left of the screen. The middle button allows you to navigate between views of the image. The right button displays a menu called "File" that contains all the functions you perform with the image. You can scroll down the list by selecting the a681f4349e

Management of primary rectal glandular malignancies. The management of malignant transformation of the rectum remains a formidable task for the physician, who must balance the risk of local recurrence of the tumor, the morbidity of any surgical procedure, and the patient's quality of life. In patients with T1 adenocarcinoma, particularly high-risk, prognostic factors that include involvement of the rectal muscularis propria or perirectal adipose tissue, lymph node involvement, the presence of tumor at the dentate line, and infiltration of the seminal vesicle, the mesorectum, the ureter, or major pelvic venous structures should guide treatment decisions. Tumor size, which is believed to reflect the aggressiveness of the neoplastic process, can only be estimated by digital rectal examination and transrectal ultrasound examination. Several prognostic classification systems have been proposed that identify patients for whom total mesorectal excision with autonomic nerve preservation may be the treatment of choice. This paper describes the role of surgical resection in the management of primary rectal adenocarcinoma.

Q: Probability of two Markov Chain to have the same state in n step How does one show that the probability of two Markov Chains having the same state at time n is $(1-q^n)/(1-q)$. Here q is the probability that the state of the second chain changes at each step. A: Call the initial state i and suppose its time n and of the second chain is j. Then $$\Pr(i,n;j) = \Pr(i,n;j) = \Pr(i,n;j|j,n-1) \Pr(j,n-1) = \Pr(i,n-1;j)\frac{q^{n-1}}{1-q}.$$ Now you can sum over all states. Q: How to compute $1/(2n+1)$? I have a question asking to compute $1/(2n+1)$ and as a part of my answer I am writing it as $(2n+1)\mathbb Z+1\mathbb Z/4n+1$. Which form is correct? A: Your solution seems correct to me. However, according to Wolfram Alpha, $1/(2n+1)$ is equal to $3/4$ when n is even and $1/2$ when n is odd. , or from service. The fee was $20,000. There were only three letters, sent from Jerusalem, for Shemuel Hamza, but he couldn't read them. He turned the letters over to his servants. He didn't believe what the letters said. He searched Jerusalem all over to find out if the angels came to him. He thought about going to all the prophets and tell them what happened. Instead he went out to the vineyard and spent the whole day there. His servants found him like that and knew what it meant. They told Shemuel that he had killed them all. They were afraid of him. Shemuel broke down in tears and swore to God that he was innocent. "The Lord will have his way," thought Shemuel Hamza. He told his servants to take
