Annotating Autodesk's Annotation is a feature in AutoCAD and AutoCAD LT which allows users to add note, comments, page numbers and other annotations to drawings. AutoCAD LT has Annotate which is a drawing component that allows users to annotate drawings by drawing a vector stroke. Building Information Modeling BIM support is one of the more unique features of AutoCAD and AutoCAD LT. BIM allows for the visual representation of information such as the structure of a building. The most common uses of BIM are for the design of new buildings. Another use is to create the 3D model of an existing building for editing and improving the design. BIM allows for the easy modification of the design. Support for 3D drawing There are several ways to create a 3D drawing in AutoCAD and AutoCAD LT. They include: View, Modify, Operate Editing and Drawing Freehand Entity Paper space drawing Desktop view View, Modify, Operate (VMO) is a way to model a 3D space. For this it uses three views: paper space desktop 3D space One advantage of using VMO is that it is non-destructive. VMO allows users to change the model, for example, rotate or scale, with no change to the model. VMO is very efficient for drafting as it can build the 3D model out of a sequence of paper space drawings. Editing and Drawing is a 3D drawing application that allows the user to edit and manipulate 3D space directly. The user can draw directly in 3D space by clicking on the surface of an entity, for example, the side of a block. Freehand is a tool to sketch directly in 3D space. This tool allows users to sketch directly without paper space. Freehand is similar to creating a traditional 2D sketch. Entity is similar to freehand in that it allows the user to sketch directly in 3D space. However, this tool is more like a traditional 3D object. In this context the entity is an object that has 3D characteristics such as weight and height. Paper space drawing is the traditional 2D drafting tool. It allows the user to create an image that can be used as a reference. Desktop view is a tool that can be used to view a 3D drawing in 2D space (paper space 5b5f913d15

• Import tasks In AutoCAD and RAPIDMARK, the Markup Assistant dialog box can display the imported labels and/or dimensions for edits. You can interactively choose the new labels and/or dimensions you want to incorporate into your drawing. The Markup Assistant continues to work as a data-driven system; there are no extra steps to import them into your drawing. • Export tasks You can use the Export Data dialog box to create a.txt file of the imported labels and/or dimensions and automatically make that file available for future uses. Or, you can choose to export a file in.PDF format to display the imported labels and/or dimensions to a user. • Markup Assist features Using the Markup Assistant and/or Export Data dialog boxes, you can change the labels, dimensions, and properties of existing or imported markers. With the Markup Assist, you can: • Select existing and imported markers to add or delete properties. • Edit markers and tags, such as changing their text, font, color, and/or size. • Remove and add lines and text. • Add orientation, position, and dimension properties. • Change dimensions and labels to match physical measurements, such as inches, feet, or yards. • Change graphic representations to show text, arrows, or other symbols. • Add/remove marker symbols to existing or imported markers. • Retain the text of imported labels and/or dimensions for edits in other files. Faster release cycle of new features Thanks to enhancements in the AutoCAD Release Management tool, you can now release new features much more frequently. When you enable the AutoCAD Release Management feature, an.xsdx file is created at the project level. This file will contain the current states of the symbols in the project and the objects on the screen. This is done using a technique called "code injection." This.xsdx file provides the reference for the new release management functionality, but it also changes the way a new release is enabled and enabled by default. By default, the project is always configured to "release auto," which provides the most recent state of the project. With the new release management functionality, the project is configured to release every 10 days or every 60 days, whichever comes first
