Markup Import is a feature that automates the creation of feedback from information printed on paper. Using Markup Import, you can add marker icons, icons, and text to your drawing to indicate areas, step sizes, comments, or symbols that you want your team to see and understand. While your drawing remains on your screen, Markup Import will import the paper information and automatically annotate your drawing, aligning and enhancing the imported text to the correct position, and simplifying complex symbols. The Markup Import process is completely automatic. No additional drawing steps are required. You'll never miss a change or let a document fall behind. After you use Markup Import for the first time, any subsequent uses will automatically use saved settings. To learn more about how to work with Markup Import, see these topics: You can read the official Autodesk Support article at: The new Markup Assist feature simplifies the task of transferring geometric information from a printout or PDF into your design. Using Markup Assist, you can export your drawing from software (AutoCAD LT and AutoCAD Architecture) directly into a new project.
