Data interchange formats DXF is one of the data formats used in AutoCAD and in AutoCAD LT. DXF (Drawing Exchange Format) is an AutoCAD-specific format for exchanging drawings. It is a binary file format that can be read by AutoCAD, AutoCAD LT, and other CAD applications. DXF is also the native format for all other major CAD products. The format supports the following functionality: describing geometric and topological information (such as drawing objects, attributes, dimensions, and materials) the ability to store text bitmap images DSA (Data-Storage-Aware) is an alternative, open standard for the exchange of 2D graphics. It is a feature-rich graphic file format, developed by the company ATI and standardised by Open Specifications Group (OSG). Data Management AutoCAD data files (all types of files—DAT, DATX, and DATD) are managed by a data manager. Data management consists of three major components: the data manager the data repository the database A drawing's data (in the form of data objects) are stored in the data repository. The data repository is a database that contains the information about all the data stored in the AutoCAD database, including object type, number of vertices, etc. A data manager is a software component that manages the data stored in a data repository. The data manager also stores the data in the data repository. A data manager is not required to be part of the CAD system, although many do contain built-in data managers. The database is a backend component for the data repository that stores the data objects in the data repository, provides support for rapid look-up of data objects, and provides validation, retrieval, manipulation, and storage of AutoCAD data objects. AutoCAD Database (DATDB) The AutoCAD Database (DATDB) is a relational database based on Microsoft's SQL Server. It can be installed on a hard disk or on a remote database server. The data stored in the database is managed by the Data Manager, which was introduced with AutoCAD 2002. With the 2007 release of AutoCAD, the Data Manager

was separated from AutoCAD and was a separate software package, called the Autodesk Data Manager (DMD). The DMD interfaces with the DATDB, which supports the following: a1d647c40b
