Draw Adobe Draw is a powerful feature-rich drawing and illustration application. It has solid graphics capabilities with many features similar to Photoshop, but its UI (user interface) is a little different than Photoshop's. When you launch Draw, you are met with the default interface (as shown in Figure 4-19). As you can see, the interface is more than just the workspace, it is the application. **Figure 4-19** The default Photoshop interface showing the images palette on the left and the workspace on the right. **Figure 4-20** Using the Gradient tool Similar to Photoshop, you can add several layers and edit them by using layer masks. You can also use the Eraser tool to delete portions of a layer. Note that like Photoshop and other image editing applications, it's best to save your drawing before applying it as a layer in another drawing. You can make adjustments to the drawing as needed by simply clicking on a layer and applying a setting such as Levels or Curves. As with most applications, you can add a background and remove it, and you can add text and change its settings.

We can't say we're surprised that the first season of *Adam Ruins Everything* doesn't pull any punches in its take on conservative media, but we are pleasantly surprised by how it presents its "worst" cases. Yes, the series does take time to poke fun at Alex Jones, Glenn Beck, and other right-wing blowhards — but it also looks at the way Fox News tries to mislead the public in a more subtle fashion. The viral series' third installment, "How I Learned to Lie," presents an especially instructive example of this. Sean Hannity discusses the infamous "Pizzagate" sex-trafficking conspiracy theory which was invented to defend Donald Trump, and viewers are confronted with an alarming story about CNN. Does the network have it in for Trump? Did it lie to fuel the Pizzagate conspiracy? We're not so sure. Hannity manages to cast doubt on the veracity of this claim with a simple anecdote: Hannity: Now, talk about this case a little bit. You talked to a source at CNN, but not the person who wrote it, okay? I mean, they can't be sure, right? The author of this piece is never going to be able to go back and say "Yeah, that's the reason I wrote this is because of what happened to Trump." All she can say is what her source told her, but she can't check her source, right? But you can't really check her source. You're talking about a very small group of people, at most. A dozen or so who, in the eyes of the left, are going to be the most powerful person on the face of the earth, right? What's going to be in that room? Correct. CNN has no way of knowing whether it's peddling disinformation about the Trump team (and so many other reliable media organizations are prone to such dissemination). So Sean Hannity, here, is correct: CNN is certainly wrong to claim that Hillary Clinton's campaign didn't know about the "hundreds" of child sex slaves living in tunnels below a pizza parlor in Washington D.C. "What's going to be in that room?" During the political conventions, all of that is going to be in that room. What CNN didn't want to know is how quickly and how readily one of its own contributors was forced to release a statement. In August, contributor Mary Katherine Ham tweeted this: I'm starting an effort
