(0.1.6.13) keymacro is a lightweight (1.0 K) utility designed to provide the features required by most keyboard macro programs, while remaining free and lightweight. Features Powerful scripting language keymacro can be used for complex scripting tasks, such as building your own GUI-based macro application, editing files, automating and

monitoring the system. You can use the standard scripting language as well as the extended scripting language (ex. Replace text in files, fill files with text,...). Scriptable keymapping Most of the keymapping features have scripting interfaces. In addition, the GUI provides several methods to automate and control the keymapping (keyboard, mouse or joystick). Selectable file mode In the default file mode, keymacro displays the name of the file. You can change this behavior so that it displays the file's contents or even opens the file in the application associated with the file. Debugging mode You can open the log file in the debugger when the problem occurs. This way you can explore your keymapping and script exactly when you want to find the problem. File selection mode keymacro offers several ways to select a file. You can open the file in the default editor or choose an alternative application. Automatic typing keymacro can automatically type a string in several files. For example, you can configure it to type a text in a certain file every N minutes. Multiple windows keymacro is fully integrated into your Windows desktop. It can open a second window for each file. Each file is automatically opened in the correct application. Ability to save files You can save your script or keymap to a file. The.kmap extension is added automatically. The script can be reloaded from that file on startup. Automatic load of scripts The shell can automatically load the files you have saved as keymaps. You can select the application in which to start the script. Powerful and full-featured scripting language keymacro is equipped with a powerful scripting language, which allows you to build your own scripts or modify existing ones. You can save the files as text files. Paste and object orientation support You can copy and paste text, or even file objects, into your script. You can also store the objects in variables. You can save the files in text or object mode. You can also manually convert a text mode file into 1d6a3396d6

Log Expert [Updated-2022]

Log Expert is a small application whose purpose is to help you analyze log files. This Windows tool is built as a replacement for the tail program on Unix systems and allows you to visualize the tail end of a text file. Carry it with you everywhere The portable running mode gives you the flexibility to copy the utility on any USB flash drives or other portable devices and run it on the target system without administrative privileges. It does not write data in your Windows registry, so you may get rid of it by simply deleting the items that you have downloaded from the Internet. Running the utility implies only the opening of the executable file, as there's no installation included in the setup. User interface and importing options Log Expert delivers a multi-tabbed layout that helps you keep track of multiple projects at the same time and easily switch between them. Data can be imported in the working environment using the built-in browse button or drag-and-drop support. In addition, you may open a new tab with clipboard information. Bookmarks and other handy features Log Expert offers you the option to create bookmarks, export them to CSV file format, and jump to the next or previous bookmark. You can go to a specific line number, perform searches throughout the text, apply text filters, alter the encoding (e.g. Unicode, ASCII), and make use of highlighting options. Columns can be split using different criteria, such as split every line into three fields (date, time and the rest of the log message) or split CSV files into columns. Plus, you can read and format XML log files written with Apache log4j. Each session can be saved to a file on the disk so you can import data for future adjustments. Configuration settings Log Expert lets you change the font of the text, follow tail, ask for confirmation before closing tabs, show tail state on tabs using a custom color, select the preferred encoding, configure a set of external tools, install plugins, and define the default action when opening multiple files, namely load every file into a separate tab, treat all files as a single document, or ask what to do. An overall efficient Windows tail tool In conclusion, Log Expert proves to be a handy tail tool that comes with a decent feature pack for helping you perform searches, create bookmarks, and highlight data. The main interface A clean user interface that ensures the quick operation Log Expert requires only a single file to be installed on the target machine for providing
