The keygen will be activated and save the key (actually it will replace the one from the official Autodesk site with the Autocad Key), and if necessary, run the setup. Once setup is complete, you can start Autocad. Go to Help->About and look for the 3D API version. This information is not available on the official Autocad website. Reusing an existing model If you have a model already created with Autocad, you can use that model for other parts of your work. The 3D API recognizes that the model is already created. Start Autocad and create a new drawing using this model as a template. You can now make changes to this drawing using the 3D API as if it was your own project. When finished, save this drawing in a new location and close Autocad. You can then use the API keys and version numbers from this drawing to create a project using a project template that uses this drawing. Project templates A project template is an Autocad file that includes a project definition with settings to generate a new project for that project template. When you create a new project, you can use one of these project templates to create the new project. Open the project template that you want to use. To create a new project: Click File->New->Project. Select the template that you want to use. In the template dialog, select the template and click OK.
