Groove Gunner is a free and open-source multimedia metafile editing tool and media composer that allows users to create and edit audio (including but not limited to MIDI and MP3) and video files (including but not limited to AVI and MP4). The project is headed by Nicolas Käser. It started in 2004 with the intention of creating a tool that could be useful for electronic artists to create and compose music and videos. The editor supports a degree of automation through the use of scripting. The Groove Gunner project acts as a leader in the free and open-source music publishing industry, with the incorporation and support of several prominent content creators. The developers have support for hundreds of audio and video file formats, including 'open' formats such as MP3 and AVI, but also encoders for a wide range of proprietary file formats, including AAC, FLAC, WAV, RIFF and OGG. Project scope Groove Gunner is one of the few mainstream composers and musicians tool chains that can be used for live music performance. Its versatility allows it to work well across various platforms, including laptops, tablets, and smartphones. It has the following main features: The Groove Gunner project provides a tooling environment for recording, editing, and publishing music and video content. It consists of several modules: A graphical storyboard: The storyboard is a tool that contains interactive annotations for streamlining the workflow. It allows one or more people to work in a collaborative fashion and access this information

whenever and wherever it is needed. Tools: Groove Gunner is primarily a software development studio. However, many of its tools operate as command line applications. There are modules that produce "squeaky clean" files, add tagging, metadata, and syntax highlighting, all of which help users make more informed decisions about their composition. A search platform: Its search function allows users to find specific tracks and moments within several music applications, live performances, and libraries of BPMs, audio files, and video files. An interface to Media Manager: Media Manager allows users to move and manage their media assets. There is a batch operation for retrieving and processing multiple selections of media files. It also has a search engine that allows users to find media for use in custom tracks. These tools help users create, convert, and combine multiple types of media files. They can be chained together as an editor graphically rather than recording,
