GIS CAD systems ESRI's ArcGIS software contains the same CAD capabilities as AutoCAD. The Esri Map and Survey software contains the same capabilities as AutoCAD LT. GIS CAD systems for AutoCAD There are several CAD systems which are directly integrated with AutoCAD. KGIS KGIS is a GIS based system, designed to function as a drop-in replacement for ArcGIS and ArcView. Its key feature is that it is a GIS system that runs in the operating system as a service, like a GIS web service. It runs as a service in Windows, and a plugin in Linux. G-CAD G-CAD is a GIS based system that runs on Windows. It consists of two parts: the GIS viewer and the database. The GIS viewer runs in Windows as a service. It supports ESRI shapefiles, GeoTIFF, and GeoRaster. The database is a multi-user database. It supports databases on Microsoft SQL Server, Oracle, and PostgreSQL. The G-CAD GIS viewer, unlike other GIS viewers, supports not only ESRI shapefiles but also XAML/HTML, simple feature types, and XML/JSON, allowing easy work with any GIS data format, even without the use of a GIS server. The viewer is written in C++ and uses the GTK+ library. The G-CAD database, on the other hand, uses the SQLite database engine. Microsoft Visual Studio Microsoft Visual Studio with AutoCAD is a version of AutoCAD designed to work within Microsoft Visual Studio. In addition, it supports saving and viewing files in the extensible hypertext markup language (XML) format. OLE CAD OLE CAD is a programming extension for AutoCAD that enables CAD application data to be passed to, and from, standard file and application-file based software systems. It has been deprecated since the 2010 release of AutoCAD. PC LISP PC LISP is an extension of AutoLISP, an extension for the lisp language which works with the AutoCAD software and supports the following AutoCAD command types: ADU and Rulers: Create, View, Open, Close, Save, Snap, Configure, Import ca3bfb1094
