The flow of phosphorus (P) from the landscape into freshwater ecosystems has received renewed attention as a management issue. Two contrasting ideas of P management in the terrestrial environment have emerged, which are the equilibrium hypothesis (negative net ecosystem exchange) and the disequilibrium hypothesis (positive net ecosystem exchange). Although surface waters are commonly assumed to be in P equilibrium, there is little evidence for P fluxes of greater than zero from the terrestrial environment into surface waters. We used the concept of excess P to quantify the contribution of the landscape to runoff P loads into Lake Michigan. Excess P is the amount of P in runoff above that which would be obtained if a saturated groundwater layer were present. The excess P on lands draining to Lake Michigan was 2,500 to 3,500 Pg/year. Most of the excess P was from degraded cropland. Nutrient loss estimates for Lake Michigan indicate that the excess P is a significant source of nutrient cycling to the lake. Nutrient loss from P-limitation has been on a continuous increase in the last 20 years, driven by increased rates of P runoff. P is lost from a largely unknown source, and the fraction of total P loss that is lost from excess P has continued to increase. Future research and management should focus on quantifying the amount and source of excess P in order to properly manage watersheds that drain to freshwater ecosystems.Dry eye disease (DED) is an ophthalmic condition involving a multifactorial interaction of ocular surface and lacrimal gland abnormalities. Clinical severity is determined by disruption of blink reflex, tear production and ocular surface inflammatory conditions. A: You're looking for Super Mario Universe The team's names are Chick, Bob, and Mr Wiggles. The only skill they possess is Picking up things. I'm only guessing on how the letters relate to the teams: From the names Chick Bob and Mr Wiggles, you can guess they have to do with cooking. Bob is the color blue, so could mean sky or the sky is blue. Wiggles could either be a relation to wiggling, where he's obviously wiggling, or to wiggling the binder in his hand. And the first team name is A possible reference to Swift from Pokemon. In the first episode, she says "follow me" to Mr. Mime. Follow is the same as the tagline on the start screen, so could possibly be a reference to swift. Also, Mr. Mime is wiggly, like wiggling the binder. The second team is For Mario. He has a hat, and it's blue. The second character of the team's name is a name of several genders in the English language: boy, girl, man, woman, or other. He's wiggly, like Mr. Mime, but just a different style of wiggling. There's also the possibility that the guy is wiggling his foot, which is something he does to get attention. In this case, the team's name is for either a boy or a girl. With the help of @PorkChop, I believe the final team is Gruntilda for the c9d1549cdd

Lil' Arena is a French experimental music band formed in 1995 that specializes in close-to-real-time synchronization, using analog synthesizers, MIDI, and digital samples. It is based in Paris and founded by Debris Algorithm (a pseudonym of Alexis Lévy) while few of the members are formally composers. Lil' Arena have had many releases on Michel Grey's record label, with the most important being their debut album, *Flow of Ages*, released on 22 November 1998. Without ever establishing much of a visual presence on the street, this album was a relative critical success, with a number of scenes taking it as a model of experimental music. Their last LP, the 2013 album *The Worlds*, received a positive critical reception. As in its predecessor, the album's soundscape was made purely by using digital instruments to which several layers of tape effects were added, resulting in an organic aural experience. Three other albums, *The Mountains*, *the Clouds and the Sensors*, *Nightlife*, *Sleepwalk*, and *Sunday*, were released between 2000 and 2004. The success of these records is another subject of debate, and while the band are still valued as experimental musicians, they have been perceived as a pop-oriented band whose compositions mix melodia, guitars and synth sounds.
