Q: (Python) Write to file instead of sys.stdout? I'm trying to have the output of something I run written to a file, rather than to the console:

```
import subprocess
input = raw_input(">> ") #
Create a subprocess, give it two
arguments, # and tell it where to write the
output
proc =
subprocess.Popen(["./test2.py"],
stdin=subprocess.PIPE,
stdout=subprocess.PIPE, bufsize=1)
proc.stdin.write(input)
proc.stdout.close()
print " "
proc.stdin.close()
I expected the
output in test2.py to be printed in the
```

console, but it's printed to a file instead. This is in a windows environment. What am I doing wrong? A: I don't know if this is still the question author's problem, but here is what I suggested at the time. [...] this is in a windows environment. What am I doing wrong? First of all, you need to read the subprocess docs. There is a whole section there about the standard output and errors streams (and even several redirections. Secondly, you don't need to open the file before writing to it, just do it after and it will be created for you. Here is a simple example:

```
import os
import subprocess
input = raw_input(">> ") # Create a
subprocess, give it two arguments, # and
tell it where to write the output
proc = subprocess.Popen("./test2.py",
stdin=subprocess.PIPE,
stdout=subprocess.PIPE, bufsize=1)
proc.stdin.write(input)
proc.stdout.close()
proc.stderr.close()
os.remove("test2
```

Dragon Age: Origins, Bioware's next RPG title, is still in development and game play is currently being tested. Although the game can be played on the PC and Xbox 360, there is no date set for the PC release and it is still uncertain whether the game will be released. The early stages of the game were leaked in development notes by Bioware. Game play was described as "basic combat that you know from other

games in the franchise." Bioware has also revealed some of the main features of the game. Zombies are among the most popular and most plentiful creatures in all of the FPS games, and you will be playing as the warforged in the upcoming shooter called *Imperator: Fall of the Chosen*. In the game, four warforged characters will be called upon to fight the evil forces that threatens the lands. One of those characters, the warforged fighter named Viktor, is featured in the trailer below. According to the developer's website, Viktor will have a melee combat system and will be able to execute armored combat takedowns. The official website for *Imperator* is currently in development. You can download the *Imperator: Fall of the Chosen* demo at GameSpot's mock YouTube channel. The creators of games like *Final Fantasy* and *Dragon Age* have been attempting to redesign the role-playing genre. Director of *Star Wars: The*

Old Republic Bioware's Aaron Connors has been the designer of the project and Final Fantasy and Dragon Age creator, Mike Laidlaw has been involved as a consultant. Listening to the trailer below for the MMORPG, you can get a glimpse of what the developers have prepared for players. The free-to-play, massively multiplayer online (M
