Plug-ins A plug-in is software that is used only with Photoshop. Plug-ins enhance Photoshop's capabilities. Almost every available plug-in is specific to a particular area — for example, an image-editing feature, special effects, advanced editing, and so on. Plug-ins are available for Photoshop CS and Photoshop Elements. You can also get some plug-ins for Photoshop Elements for OS X. These plug-ins are a lot like the applications that come with that OS, such as Apple Photo Viewer. Plug-ins are not free — generally they cost around \$100 a pop. If you think Photoshop is complex, the number of plug-ins available is mind-boggling. Check out Appendix C for a list of plug-in suppliers.

Q: ¿Qué es lo que llamamos "detalles de UI" en Android? Estoy programando un app que provee un listado de imágenes y sus tamaños de base al usuario eligiendo fotografías desde el cuadro recoger de la galaxia: Una imagen en la que lo que hago es usar toda la pantalla, así puedo mostrar los informes más detallados de la aplicación: Cuando se agregan puntos de interacción el formato se ve tal cual: ¿Qué estoy haciendo mal para no poder mostrar el listado y el cuadro del botón principal en estas fotos?

A: Los elementos de las vistas deben estar dentro de una clase que extienda de View. Por ejemplo, crea una clase llamada MainActivity y crea en ella: Con el atributo "android:layout_width y android:layout_height" tu módulo de Android determina las dimensiones de este elemento. Lo puedes pensar como dos páginas, una con 100dp y la otra con 100dp. Se pueden aplicar los eventos que la vista llama mediante el método setOnClickListener El caso del botón tiene un código mucho menor, pero hay que tener en cuenta este ejemplo para poder dejar claro al código: public class MainActivity extends AppCompatActivity {
@Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main); Button boton = (Button)

Q: How to get the name of the currently active cell in Excel VBA? I want to create a macro that produces a certain text if the currently active cell contains any specific value. How can I get the name of the current active cell? A: Try this: Option Explicit
Sub Sample() Dim c As Range Set c = Sheet1.Range("A1") If Not c.HasFormula Then MsgBox "Cell " & c.Address & " contains formula." End If End Sub To access the sheet name the active sheet, use: Option Explicit Sub Sample() Dim ws As Worksheet Set ws = ActiveSheet MsgBox ws.Name'output: "Sheet1" End Sub For our community this is an odd time of year. It is not like winter and it is not like spring. We will have crazy lows in January, then we will have crazy highs in March. But we are just standing in place in between. We are preparing the horses for the spring. We are getting ready for the equine professionals to come in and do their business and we are preparing the horses for the upcoming rut. We are asking questions like "What is the best way to keep the horses out of dung?", "What will my horses be eating as they enter the winter?", "How much grass, hay and grain should I feed them?", "Should I continue to supply hay or should I use pellet feed?", "How will I deal with the excessive manure?" What are the advantages and disadvantages of grazing versus hay or pellets? If you need additional answers to any questions about how to deal with winter or spring feeding, feel free to call in and see me or have a chat with my vet tech or groomer and they will be happy to help you. These things will come to you without any guidance! I'll do my best to not bombard you with calls today or tomorrow and keep things simple.
