The first in this series of posts on patterns and libraries is available here. I had come across this rather beautiful yet simple pattern in an old VHDL paper. I'm not really sure about the original implementation (the signal declaration looks a bit odd). But the general idea is rather appealing, and I wanted to add it to the library. The pattern in question: After you're done reading the blog post, go ahead and add it to the library. Optimized textiles for human health - a new approach to textiles in health care. In the new age of biotechnology and molecular biology, the focus has shifted to a system biology approach, taking into account the holistic nature of living systems. In this direction, the aim is to use the concept of a living organism and its genomic and proteomic characteristics in the textile domain. The first step in the creation of these new fabrics is, among others, a better understanding of the living organisms and their interaction. The living and protective microorganisms are part of the human organism and therefore, the fabric that is created should in a way represent the human body. In that way, the textile can fulfill the demand of the fabric that the medical staff needs. In this study, we present a new approach to the material and textile domain that aims to improve the material of medical clothing for the protection against infectious agents. The new approach, which is based on genomic and proteomic data of microorganisms, is named as "Optimized Textile for Human Health". The new material can be designed to resemble the body's own structure, specific to a species and disease, thereby enhancing the level of infection prevention and protection. Once the method is applied to any disease, the textile created will have, in some way, the same amount of microorganisms as the human body. The article explores the approach, naming the fabric 'pulmonic fabric', which is beneficial for people with chronic obstructive pulmonary disease, because it is able to replace the lining of the lungs. Cognitive functions in schizophrenia: why are they impaired, and what can we do about it? Many years of research have shown that schizophrenia is associated with a set of cognitive impairments, starting in the early prodromal stage of the illness. There is no doubt that cognitive impairment is one of the main reasons for the disability and poor functioning of people with schizophrenia, and it is hoped that strategies to ameliorate cognitive dysfunctions will improve the outcome

### What's New In?

A three-month prospective multicenter randomized double-blind placebo-controlled trial to evaluate the use of Arthrotec in the treatment of osteoarthritis of the knee. Osteoarthritis (OA) is a joint disorder characterized by loss of articular cartilage and the development of bone spurs. Its clinical impact is significant, and approximately 30% of the elderly population suffers from the condition. To assess the benefit of Arthrotec, a membrane composed of balanced extracts of the lichens and mushrooms *Tremella fuciformis* and *Tremella mesenterica*, in the treatment of patients with knee OA. A prospective, randomized, double-blind, placebo-controlled study with parallel-group design and 3-month follow-up. Randomized, multicenter trial in 20 Italian and Swiss private or public hospitals. A total of 256 participants received Arthrotec capsules or placebo. The study outcomes were: pain intensity on a visual analog scale (VAS) and Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC) score. Significant improvements were seen in both indexes from baseline to end of study in the Arthrotec group compared with placebo. The differences in VAS pain and WOMAC scores were statistically significant in favor of Arthrotec (P As you might know, I've recently started a new job as an interpreter/translator on the Webcomics message boards at Marvel.com. My official title is "Marvel Message Board Head Translator," and I'm doing this for a couple of reasons. First, I want to help out. Comics message boards can be tricky, even for someone with a lot of experience. And even the Marvel boards, which I've been on since 1994, are still full of current issues. (Recently, for instance, a thread was started about a scene in *Wolverine #1* which has been controversial for, like, forever.) It's basically a big room of people trying to get each other to argue about the details of
