Although Photoshop is terrific for editing images, it's not the best tool for printing images. In this chapter, I cover the basics of Photoshop. You find a full list of Photoshop applications in Chapter 10.

Becoming familiar with the interface Photoshop's window is divided into three distinct areas: the workspace, the tools, and the options. The workspace contains the image that you're editing, either with one of the tools that you apply over it or by painting directly with the Pen tool. The tools are the various brushes, filters, and lasso tools that you use in the workspace to manipulate your image. The options are the sliders, eyedroppers, and other Photoshop controls that enable you to modify the size of your image and its color balance. In this chapter, I cover the basics for working with the Photoshop workspace. You also find help with selecting and moving objects around, working with layers, and making adjustments. I cover the tools in the next chapter. In the following sections, I explain the options and their uses. Getting familiar with the tools The tools section is divided into three areas: the tools, the layers panel, and the palette. The tools consist of the following: Pen tool: The Pen tool is a very versatile tool that enables you to draw, paint, or do freehand designs. Brush tools: The Brush tools enable you to work with the pixels in your image. Hand tool: The Hand tool enables you to draw freehand shapes and objects. Gradient tool: The Gradient tool enables you to make smooth transitions between colors. Blur and Filter tools: The Blur and Filter tools enable you to modify your images by blurring them and by applying a filter (a custom contrast, color, or brightness adjustment) to your image. Layer tools: The Layers tool enables you to apply, move, copy, and delete layers. Eyedropper tool: The Eyedropper tool enables you to select colors and tones from your image. You can use it with the Brush tool, but you can also select a color with the Eyedropper tool and then apply it to the Brush tool. Eraser: The Eraser tool enables you to delete pixels or objects from your image. The Layers panel allows you to add, remove, or duplicate layers in your image. The palette is

used to color-correct your image.

Q: Conditionally run asynchronous server code before first post request I have a scala Lift application that deals with both asynchronous and synchronous requests. It works fine if I write the code that processes the request to run asynchronously. However, I also have code that sometimes needs to run synchronously when receiving a web request. This sometimes needs to run before the very first web request happens. How would I write code that runs in this situation? A: If you need to run your code synchronously, you can just wrap it around the full POST request handler. You want to process your request and call it's continuation, then call that continuation's continuation (somewhere). For example: `def runMyAsync(req:Request, future: Future[Entity]): Future[Entity] = { // process req. Async val answer = future.map { e => Ok(e) } future.future.map { _ => answer } } def handleRequest(req:Request):Future[Response] = { Future.successful(Ok(Content(...))).flatMap { res => Future.successful(Http.clientRequest(url).get(res, req)) } } // Use it like this: def handler = handleRequest _ runMyAsync(req, handler) Alternative: Scala Futures thread-safe wrappers have a convert method that lets you convert a future to a value, allowing you to hook into it's completion. def runMyAsync(req:Request, future: Future[Entity]): Future[Entity] = { // process req. Async Future.successful(entity) // convert the future into a value } def handleRequest(req:Request):Future[Response] = { Future.successful(Ok(Content(...))) // convert the future to a value } // Use it like this: def handler = handleRequest _ handler.flatMap { req => Future.successful(runMyAsync(req, handler)).map { _ => Ok(entity) } } Guinness World Records could be very interested in your musical tastes. It's not just about hockey in San Jose Share this: SAN JOSE, Calif. - Bovada released the NHL odds for the postseason, and when you consider the difficulty of reaching the playoffs in the NHL, San Jose has a very small chance. San Jose has zero percent odds to make it to the Stanley Cup Finals. It's not like the Sharks are in a position to complain. With five rookies on the roster including forwards Tomas Hertl and Devante Smith-Pelly, San Jose has the youngest team in the NHL. "Obviously you take the young players, but you take the young players you can develop for future in your organization," Sharks general manager Doug Wilson said. "It's all about, can you take your young player and can you get them to be a superstar?" With just two games left in the regular season, it appears the Sharks will be a young team again next season. "I do think we'll have a core of young players that will be around next season because of the way we developed them this season," Wilson said. "It gives you a better chance." The Sharks have their eyes on the future but they certainly

aren't overlooking the now. The rookies are on the ice this week as the Sharks took time to speak with them about the Stanley Cup playoffs. It's not like there is a secret meeting or strategy going on in the locker room. "There's not much of a secret, but I do think there's a lot of focus and energy on what our young guys are going to do," Sharks coach Peter DeBoer said. "We all know we're not competing against anybody." San Jose came up huge in the win over the Kings, but will it be enough? DeBoer said the Sharks are looking at the playoffs and the rookies are excited about the opportunity. "They're kind of on it," DeBoer said. "We're all excited and ready to go. We're anxious to know what the playoffs will look like and where we fit." The Sharks said goodbye to stars Joe Pavelski, Brent Burns and Jonathan Quick. Other than that, the Sharks have a young team, so the rookies will have
