Like Photoshop, Elements also has a built-in selection tool and one of the best batch processing options in the business. But unlike Photoshop, Elements has a much simpler, less-cluttered interface with just basic tools, layers, actions, and settings. There are quite a few Photoshop alternatives for Windows, macOS, and Linux. The list below ranks the most popular tools. Read on to learn more about the tools, which ones to download, and why you should use a particular program.

1. **GIMP** A favorite among professional and amateur artists worldwide, GIMP is one of the most powerful and robust open source image editors for Windows, macOS, and Linux. You should download GIMP if you want an open source alternative to Photoshop (or if you're willing to sacrifice a lot of power for less options). Why GIMP? It has a ton of features (there are hundreds of additional features in the GIMP plugin store), it's free for personal use, and the learning curve is very short (it's only a little more difficult than using Paint.NET in Windows). On the downside, GIMP lacks a lot of the features that most users need to create highly professional-looking images. And if you need to make a batch of changes to the same image, you need to open it in GIMP separately. Pros: Monochrome support RGB and grayscale support Color picker Smart Sharpen and Blur filters Histogram Several types of brushes, gradients, and textures Image Format Support: PNG, JPEG, PSD, GIF, BMP Image Formats Supported by Plugins: JPEG, PNG, BMP, GIF Audio support: Wave, MP3, and Ogg Vorbis Media Support: MP3, OGG, AAC, JPEG, PSD, GIF, and TIFF It works natively with both 16-bit and 32-bit floating point images You can also import any Photoshop file into GIMP. If you want a more graphical editing experience, GIMP is the tool for you. Why not? It requires a bit of skill to create professional-looking images in GIMP. Many people like to use [05a79cecff](#)

Two Arizona State University sorority members claim they were sexually assaulted by their national fraternity -- all because the chapter didn't allow women into their events. The students told The Arizona Republic their alleged attacker was in their Alpha Phi sorority chapter last March, when they took part in a social event for women only. "I didn't know what was going on. I didn't have any knowledge that it was going to be a night of male-on-female assault," said one of the women. "People were excited about it, they were throwing around the word party," another said. "I was hoping that it was going to be a social thing and a night of socialization for the women." It quickly turned out to be anything but. "When we walked in and realized we couldn't take our shoes off, and that men were going to be drunk every where, I just completely froze," a third woman said. Alpha Phi Fraternity is headquartered in Columbia, Maryland. The chapter at Arizona State University is closed. The incident came to light when the group's national organization learned about it, the sorority's president told The Republic. When the national decided to notify the police, all three women were contacted. Police says they are investigating the case, but since no arrests have been made, they don't know who is responsible for the alleged assaults. Their alleged attacker was a senior at Arizona State University at the time, and is no longer with the fraternity, the women told The Republic.

The effect of 2,3-bis(2-chloroethyl)-1-nitrosourea (BCNU) on the activity of mouse tumor antiviral interferon. 2,3-Bis(2-chloroethyl)-1-nitrosourea (BCNU), a drug which has been shown to exert a paradoxical antitumor effect on various human tumors, was administered daily to mice for 1 week following infection with 100 PFU of herpes simplex virus type 2 (HSV-2) on the left foot pad. Bedding soaked in BCNU or distilled water was applied immediately prior to infection. Experiments were terminated when the development of footpad lesions was observed in the BCNU treated mice. Tumors, lymph nodes and spleen were removed for virus isolation. The day of death or termination of the experiment was considered day 0. The results indicate that the presence of BCNU in the environment diminished the response of the mouse to footpad infection with HSV-2 by a factor of 1.5. Moreover, even animals infected without BCNU treatment and sacrificed at day 7 had a high degree of resistance (day 0-7 footpad tumor: uninfected 16 +/- 3 mm, infected 20 +/- 2 mm, P greater than 0.05). The in vitro effect of BCNU on mouse antiviral interferon was also examined. The sensitivity of NIH/NRC/3T3 cells to antiviral interferon was greatly diminished by concentrations of BCNU (5×10^{-5} M) sufficient to inhibit cell growth (41-83% inhibition). Thus, the observed effect of BCNU on the immune response of the mouse was attributed to the immunosuppressive rather than the antitumor effects of the drug.
