There are some limitations to the software. If you use

Project Plan with Microsoft Project (2002) versions prior to version 12, the import/export options will not be available. If you already have Microsoft Project or Microsoft Project 2007, and you plan on upgrading to Project Plan, you should note that there are some significant interface changes for Project Plan 2007. Some of the

interface differences are:
An icon has been added to the top of the Task List window (replaces the Task List Window) The Project Plan task panel has been changed from a menu to a tab in the Task List window In Microsoft Project 2003, each task type shows an abbreviation or icon to indicate the task type. The task type can be one

of several supported types for the task. These default types include "Schedule", "Organize", "Assign", "Do", "Update", "Delete", "Cancel", "Start", "Finish", "Contact", "Followup" and "Archive". If one of these default types appears next to a task, the task type is derived from the resource type. For example, if a task is

named "Do", then it is a task type that derives from the resource type "Create". If you are planning to export a Microsoft Project file, you must use a Microsoft Project 2010 file format (.mpp). Many of
