AutoCAD is available in the following editions: AutoCAD LT, AutoCAD Standard, AutoCAD R14, and AutoCAD LT/R14. AutoCAD LT is the first release of AutoCAD, and is the lowest cost option for non-commercial use. AutoCAD Standard is the most expensive, and is intended for businesses, engineers, architects, and other professional and trade users. AutoCAD R14 is a complete release of AutoCAD that includes some new capabilities, along with numerous enhancements and refinements to existing features. AutoCAD LT/R14 is a combination release, comprising a combination of the functional capabilities and data files of AutoCAD LT and AutoCAD R14, for use by individuals and small businesses. AutoCAD is the world's leading integrated 2D and 3D CAD program. AutoCAD is used to design and create all aspects of buildings and infrastructure. AutoCAD is widely used in the construction industry, including for civil engineering and landscape design projects.

New Features and Capabilities Multi-User Capabilities AutoCAD LT (and AutoCAD LT/R14) can be installed and used by multiple concurrent users on a single computer. By default, AutoCAD LT/R14 runs in a shared mode, which means that access to a file or application is distributed to all users who access the file or application at the same time. A different user mode is required for each user. AutoCAD LT allows each user to open their own private work space and access only their own data. This is useful in circumstances where all users need to use the same drawing, but where one user might have to change other users' data, and where a different set of parameters or customizations are needed for different users. The file sizes used in the private user mode are much smaller than in the shared user mode. Multi-user work spaces also exist in AutoCAD Standard and AutoCAD R14. However, the available user mode is only shared and not private, and the private user mode in AutoCAD LT does not exist in other editions of AutoCAD. In addition to the user interface, AutoCAD also provides access controls on files and workspaces. These controls are the ability to have read and write access to drawings and layers, and allow access to sections and components.

Autodesk Design Review Autodesk Design Review (ADR) is an automated 2D CAD review solution that can be integrated with Design Review and can be used as a standalone application or as a plug-in for Design Review. With Design Review or ADR, review tasks are organized into milestones with specific review criteria, and automated with a workflow process to verify the review. ADR can be used to perform 2D CAD review on product, specification, and quality documents. Automation in review projects can be triggered by the review report, design inspection, or other events. Review results are stored in a database, which can be searched by selected criteria. Automated 2D CAD review requires a CAD system with the following characteristics: A 2D CAD modeling tool Document management for use in the review process Standards and rules for review comments A work flow for the review process Design Review and ADR can also

be used in a 3D CAD environment by using an ADR plug-in for SolidWorks. eDrawings is the name for the XML-based, Enterprise Architecture 2D drawing format developed by Autodesk Inc. (Autodesk), which is a digital drawing standard developed specifically for the BIM (Building Information Modeling) market. eDrawings is widely used in large scale construction projects. Autodesk currently offers eDrawings open-source products for viewing, commenting and editing. Autodesk also offers eDrawings as part of AutoCAD Architecture and Design Review (ADR). eDrawings is based on Autodesk's successful Parametric Drawing XML (PDX) standard, which has been developed in conjunction with numerous major architectural and engineering firms. PDX is a digital drawing standard used by large architectural design firms throughout the world and it is the industry standard format for sending building information models.
