Â· Â· Ã¢Â□Â□Let us be guided by the principles of compassion for all living things.Â . Â· .Q: What character values will appear in a result set when parsing JSON text? I am querying a table with a parameterized query where the value of the parameter is a JSON text. The problem is, the value of the parameter may contain some characters that are not valid values in SQL Server (for example, quotes). What characters will appear in the resultset when I use the JSON_value function? A: I faced this problem couple of months ago and ended up taking this approach: You need to execute the JSON query "manually", using the openrowset approach. Open the result set and use a table variable to perform the conversion: declare

@json_variables table ([value] varchar(max), [name] varchar(50)) declare @json varchar(max) = '{"a":0,"b":1}' insert into @json values (@json) declare @var varchar(50) = '{"b":1,"c":0,"d":2}' insert into @json_variables (value) values (substring(@json, patindex('%{"[a-z]":[0-9]}%', @json), patindex('%{"[a-z]":[0-9]}%', @json))) select @var, [name] from @json_variables order by [name] If the pattern fails, the data is ignored. You can skip the first substring with some care. The result: value name -------------- ----------- a a b b 0 0 1

Then, click Install this Program for more details, see below screenshot. After that click Details to reach the downloaded setup, follow the instructions from the setup. See below image. Click Next to make the installation procedure complete. See below image. Q: How to create events for dynamically created buttons? I am trying to get my event to dynamically created buttons. I am able to get the event to work when the button is created the first time but it doesn't work at all when the button is created a second time. Here's my code: Private Sub Sumas_Click() Dim i As Long Dim suma1 As Double, suma2 As Double If Me.Sumas.Value = False Then MsgBox "Please enter values for the sums you would like to calculate", vbCritical Me.Sumas.SetFocus Else 'pump the values of the QtyBox.Text to the variables suma1 = Me.QtyBox.Text suma2 = Me.QtyBox.Text 'add the values to the local variables suma1 = CDbl(suma1) + CDbl(suma2) suma2 = CDbl(suma1) * CDbl(suma2) MsgBox "The

sums are: " & suma1 & " + " & suma2 & vbCrLf & "The product is: " & suma2 & " x " & suma1, vbInformation Me.Sumas.SetFocus End If End Sub Private Sub Sumas_AfterUpdate() Me.Sumas.Value = False End Sub And the image of my buttons: A: I'd add a button to your form that does a Postback. Private Sub btnSumas_Click() Me.Sumas.Value = False End Sub Put your check for the sum to check for btnSumas_Click is good. Then where you have Me.Sumas.SetFocus put Me.btnSumas.SetFocus to reset the focus to btnSumas when the form loads.
