Blue IP Scanner is a very simple IP scanning utility that provides only the basic tools to check a user-defined range of IPs. The application has a fairly user-friendly interface and it needs just a few adjustments before the actual IP scanning process begins. You need for example to specify the IP range to scan, define the ping timeout and decide whether you want to resolve hostname or not. After that, it's enough to press the "Start Scan" button to check the selected IPs. As you can see, Blue IP Scanner is pretty basic, so there are no other configuration screens or menus at your disposal. There's a dedicated tool to save the IP scan results separately as a CSV file, but other than that, it remains a minimal utility. The scanning process goes fast and doesn't stress up the computer too much, at least not when you're scanning just a few IPs. Things are slightly different when Blue IP Scanner has to deal with larger IP ranges, but still, it remains a decent application when it comes to the amount of resources it needs to do its job. The main window displays only the IP address, the host status and the host name, so some of the users may be disappointed as there's no way to open the scanned IPs or at least get more information on a specific machine. Overall, Blue IP Scanner is one of the simplest IP scanning utilities on the market, but it does what it says without hampering computer performance. It runs well on all Windows versions, but it provides absolutely no other feature besides the main IP scanning tool. Screenshot Blue IP Scanner site includes the following files: Bluehelps.ico Bluehelps.sfx Bluehelps.txt Bluehelps.zip Please read the ReadMe.txt file before you install. Please choose one of the following options to install the program: Option 1: User Account Control (UAC) Scans In this option, you are prompted for administrative credentials when you are prompted to save the files to your computer. To continue the installation process, click "Continue." Option 2: For Local Users Only This option does not require administrative credentials to save the files to your computer. To continue the installation process, click "Continue." ... Hijacking process There are a number of programs that can do this and they all have similar functionality, such as being able

Blue IP Scanner is a Free IP Scanner that allows you to scan IP ranges. This tool can scan IP addresses or host names. You can select specific IP address ranges or search for Host Names. If you select specific ranges, you can scan up to 5 ranges. Blue IP Scanner Key Features: - Free - Simple to use - Easy to use - Search or Scan IP ranges and/or host names - Scan up to 5 ranges - IP Scan Tool Download Blue IP Scanner: Blue Coat Application Manager is a powerful, free, web-based software solution for managing your network's security infrastructure. This is an easy-to-use, intuitive application that provides the basic functionality needed to configure and administer a firewalls. If you need more advanced options, you can still use the application to set up and manage firewalls, but to do that, you'll need to download the Blue Coat Insight Manager Application. Blue Coat Application Manager's main window displays a series of screens that control various aspects of the application's functionality. When the application is launched, you have to choose the Firewall Type, the port range to scan and one or more options that are not directly related to scanning, such as Media Access Control (MAC) filtering, Layer-7 restrictions or IGMP filtering. From there, click the "Next" button to proceed with the actual scan process. Blue Coat Application Manager does an excellent job of scanning an array of IPs. In fact, the program is so good at it, that you can even scan all of your IPs with just a few clicks of the mouse. If you check the boxes associated with the IPs you want to scan, Blue Coat Application Manager performs the task without any problem and it's the fastest method of scanning. When the scanning process has finished, you will get a comprehensive report with a lot of information on each detected host. This includes such data as the host address, the IP, the port, the MAC address, the source port and other things like this. Blue Coat Application Manager supports both IPv4 and IPv6. You can also scan a specific host name or a range of IPs using the advanced search option. Blue Coat Application Manager allows you to choose whether to perform DNS lookups on the IPs scanned. If you choose to check the host's name, the application makes an attempt to resolve the host name to its IP address b7e8fdf5c8

Blue IP Scanner is one of the best free IP scanner apps on Android. It can scan all IP addresses that are in a range, check ports, resolve hostnames, DoS attacks, blacklist or whitelist IP's. It has a lightweight interface and does not require root. A direct scanning of IP addresses is one thing, but how about checking your range for any intruders? Like in every other IP scanner app, Blue IP Scanner can detect, scan and diagnose as well. Simply state the IP range and let Blue IP Scanner do its magic. Either by scanning IP addresses or attacking them with Pings. The scanning of IP addresses is fast and simple. No need for a PC with Internet access. The app constantly takes care of the scanning process and notifies its users through an SMS or email. Blue IP Scanner is worth a try, as it's one of the cheaper IP scanners in the Google Play Store. If you're looking for an IP scanner that will fit in your pocket, then Blue IP Scanner is it! What's new in this version: 1.
