"When you're standing on the pitch, you don't know where the ball is going to be. We believe we can bring a level of authenticity and excitement by using a combination of different technologies to allow players to see and react to the ball in ways they've never seen before," said Jens Hilgers, FIFA Game Director. The custom engine that powers Fifa 22 Torrent Download has the ambition to re-imagine how football is played and experienced on the pitch in a more responsive and authentic way. What we want to do with FIFA 22 is to give the fans something they haven't experienced before. We know that this is an ambitious goal, and we are confident that we have the right technology to make this happen. "The biggest difference with FIFA 22 for us at EA Sports is that this game is going to be motion captured, live, with real football players." added Hilgers. "We plan to take the game to the next level in terms of precision and responsiveness by capturing the movements and emotions of the real players. This was a unique opportunity to work together with the real players and the data that we captured really enabled us to re-imagine how football is played." In addition to the "HyperMotion" system, the game engine also features a more advanced biomechanics engine, a new animation system for more realistic animations, a new torsion system which controls muscular tension, and new activation and control methodologies for better responsiveness and interaction on the pitch. "We tried to keep the look of the game as close to the real pitch as possible," Hilgers continued. "We have the best licensed team of players and the best of the best competitions. We can tap into real-life data to make sure we have the most authentic and responsive football game of all time." The announcement of FIFA 22 – more than ten years since the last edition of the top-selling video game – has been greeted with a chorus of fan approval.
