In case of any problem or questions, please contact us. to his wife, Joanne, and will forever be grateful to his parents, Gary and Linda, and his brother, Bret. Ian's friends will remember him most for his genuine warmth, sense of humour and rare gift of love. A long, proud family life makes a difference. And Ian was an excellent example of how to be a full-time mum. Joanne will miss his smiling face and his love of life, his passion for family and his jigsaw puzzle skills. On a more personal note, we miss his extraordinary way of looking after us, especially when he had epilepsy. We wish to thank the following for their help in keeping Ian home: Seema, Ian's loving wife of 11 years; Nancy, Julie and Claire from the Chronic Pain Nurses Association; Janet, Ian's general practitioner; The Health Care Administration Board, particularly the Health Services Commission; Simon and Colin, Ian's Accident Rehabilitation Unit nurse colleagues; Kate, from the Epilepsy Foundation of Victoria; Roxanne, Ian's occupational therapist at Epworth. Our thoughts and prayers are with all of you as you cope with this sad, sad loss. Maria, Alan and Jan Related resources Revised April 2020Q: Windows Scheduled Task - Log in as another user I have created a task in Windows Scheduled Tasks with the following command: schtasks /run /tn "Task Name" /sc MINUTE /mo 30 I run the task in the following way: schtasks /run /tn "Task Name" /user:username /p password It works perfectly. But I can't find a way to pass the information I need to the command line. I know that I could pass it as a variable, but I don't know what kind of variable I need. The argument I need is the "description". So, my question is: how to pass the parameter "description" to the Scheduled Task. A: Most likely you'll want the /description option: Description Description of the task.
