The technique used to prevent the occurrence of bit errors in the transmitted data is referred to as Forward Error Correction (FEC). One of the many FEC techniques that is widely used for the encoding/decoding of data involves a convolution encoder/decoder (CODEC). Generally speaking, convolution encoders are well known in the art and are often used for a variety of purposes including, but not limited to, encoding/decoding data. In general, the CODEC is a pair of circuitry which includes a feed-forward recirculating shift register and an accumulator. The feed-forward shift register is used for encoding data into a codeword and the accumulator is used for the decoding process. The convolution encoding process begins with the feed-forward shift register. A pre-determined code word is loaded into the feed-forward shift register and a predetermined codeword sequence is transmitted through the CODEC. The CODEC also operates by receiving the codeword sequence and decoding it into the predetermined code word. As indicated by its name

What's new in Brain Storm : Tower Bombarde:

Courte Edit Locked This is a gameplay technique used by Game Freak where the player's character is treated like an augmentation of a similar character within the overworld. In essence, the player is a portable Bombard who can go where they please as long as there is an exit. Some Bank Holders love to have a bomb ready that they can drop just to watch the explosion. Stuck on the Slopes of Mount Sneasel in Pokémon X & Y, players who want to get past the boulder blocking the way can apparently use their bicycle to push the boulder aside. However, when you get the bicycle, you no longer possess it, and you can't go anywhere. While you're stuck, your only options are to keep trying to push the boulder and die, or get off the mountain and find somebody who can give you a Bike and has spare bikes. In the end, you either swim or ride down the slope. Tower Defense 2 is a match-3 puzzle game about shooting enemies with your turrets. This exception occurs when you use a specifically-designed Bombard's turret to make a bomb out of your enemies. While basically the same, the Bombard's turret will deactivate immediately after it detonates. In Ring Runner, the "Mecha" also serves as this for the Crayon Shin-Chan after using the brand new Ribbon (Rage mode), and Data-eque Brainsta. Possessed: The Lunatic Ghest Chained Gauntlet from Magicka is both a device to trap souls and a sort of bomb. It will send enemies to the lowest level of Heck, and some of them may be latched onto the soul, leaving the magick user vulnerable. The bomb itself can be attached to just about anything, though they sometimes do the friendly thing and explode on impact with chests, dead bodies, etc. However, the more you delay getting it to the target the more souls are latched onto it, and the more mobile or powerful the target, the more souls it houses. It should also be noted that the explosive effect is not permanent, so the trap can be removed and it's effects nullified. Finally, after the souls are released, the trapped enemy will be sent right back to the gauntlet. Parodied with the very obvious goal of the Mae Sot Thai Bada game: the character controls a light bomb, called The Bomb, and the game just involves flicking the Bomb at things,
