Estoy haciendo mal un script que extiende/quemado el objeto de la función async/await? Estoy haciendo mal un script que extiende/quemado el objeto de la función async/await. La función es la siguiente: `const List = require('list') async function lista() { let result = await List(['alto', 'bajo']) console.log(result.toString()) }` lo que no me esta funcionando es: `let result = await List(['alto', 'bajo'])` A: Problema Constituye un problema para las personas que usan list() como herramienta común de negocios, ya que sólo permite mapear una lista de argumentos, pero no funciona exactamente como lo que parece que quieres. El problema es que List() recibe como argumento una lista, pero el parametro que siempre usará List() como resultado es result. código que funciona `const List = require('list') async function lista() { let result = await List(['alto', 'bajo']) console.log(result.toString()) }` Los argumentos pueden ser pasados por paréntesis (máquina de texto (cualquier sistema operativo) puede leerlos); código que genera error (as expected) `async function lista() { let result = await List(['alto', 'bajo']) console.log(result.toString()) }` Error en el argumento 1 (no es una lista) O bien, si usamos

Born in Bingley, Yorkshire, England, Kerley was a left arm fast bowler, and is recorded as taking just four wickets. Though he scored two runs on debut, he was expensive and scored just one run for 13 in his first innings. He died in Huddersfield, Yorkshire, England in 1956. charts. During medical treatment, patients typically receive medications, tests, and other medical records and images from various medical professionals. There is generally a large variety of patient records that must be organized and maintained at a physician's office. While some patients may have the ability to maintain all their medical records at a physician's office, patients who have complications and/or chronic conditions often have to rely on other caregivers to maintain their medical records. Some patients lose or give away their medical records, which may increase the risk of medical complications. Medical records are thus often stored at the home of the patient, in some cases organized into paper files that are kept in a linen closet or other out-of-the-way location. When some families have large or additional medical histories, paper records can grow to be unwieldy and harder to manage.P
