The Visual LISP and AutoLISP programming languages support the creation of extensions (plugins) to Autodesk products. By combining the two languages with

---

the commands and blocks that work within AutoCAD Download With Full Crack, it is possible to develop and debug plug-ins very quickly. The VBA programming language is used in Microsoft Office (and other Microsoft products) as a programming language for macros. This may be used within AutoCAD to create or extend AutoCAD functions or even to automate use of the drawing tools. Autodesk also offers for free the .NET Application Programming Interface which allows programmers to create add-on software and extensions to AutoCAD. See also List of computer-aided design programs

grains dispersed therein and in which the majority of abrasive grains having a diameter of 30  $\mu\text{m}$  or more are supported on the body surface. A glass coated abrasive body is manufactured by dispersing abrasive grains in a matrix of an inorganic bond, for example, a vitreous bond, and forming the abrasive grains into a predetermined shape. The glass coated abrasive body is generally manufactured as a disk which is the product of, for example, a sawing operation for a cylindrical raw material. Specifically, the glass coated abrasive body is manufactured by forming an abrasive grain-containing abrasive

coating material over a surface of a substrate which is substantially circular in shape, and then, sawing a circular plate-shaped raw material formed by bonding the abrasive grain-containing abrasive coating material to the substrate. One type of glass coated abrasive body which is manufactured by the above-described method is a glass coated abrasive body having abrasive grains dispersed in a vitreous bond. The manufacture of such a glass coated abrasive body requires a step of cutting and shaping the glass coated abrasive body, and also a step of dispersing
