OMNIC is an FTIR Multivariate data analysis software designed to provide the fast and full features that researchers demand. OMNIC also includes several other graphic functions, such as plots, histograms, bar charts, and other graphics. Learn more about OMNIC, its features, and benefits in our OMNIC 2015 Quick Start Guide. OMNIC functionality is totally integrated into the BioPhenomena FT-IR data collection package. It also includes graphing functions such as: line graph, bar chart, histogram and table view. OMNIC is written completely in C++, which makes it very fast and efficient. OMNIC supports several Linux platforms and Windows OS. Additionally, OMNIC will run on any modern Linux distribution, such as Ubuntu, Fedora, and others. OMNIC also includes a range of pre-built TGA-IR libraries, two of which are free. This allows FT-IR users to get up and running quickly, without having to resort to finding or building a FT-IR specific library. Download OMNIC v2.1 OMNIC 2.1 is available for download, install, and use free of charge. OMNIC 2.1 is a free upgrade of the OMNIC v2.0 which was released in July 2010. As it turns out, we use OMNIC for all our FTIR data gathering and analysis. We have tried other FTIR software, but haven't had much success with them. For one, they are usually slow to load and launch, and the numbers of features are limited. Also, the scientific writer for these programs is limited, so there is not much that you can do to get meaningful data out of the instrument. The OMNIC Scientific Writer software is basically a simple and powerful Python software that allows you to load, view, organize, and export your FTIR data in many ways.
