My Page.USB-MIDI Driver V3.1.4 for Win 10/8.1/8/7 (64-bit)., Rating. LinuxÂ .Our friend here at BoingBoing, Jason Koebler, figured out that you can download the whole IE11 beta using this handy script. The script grabbed every DLL that IE uses, and copies them into your user profile. That way the IE11 beta takes advantage of all the new, shiny stuff in IE. And, once the beta is live, you can roll back to the IE11 that was released. Download from here. The biggest batch of DLLs (95,953 of them) are available here. (Source: Big Internet Archive mirror) Download the long, single-DLL batch here. You could also try to reverse engineer IE11. I think Microsoft will be very sad to hear about your efforts. Thanks to Jon Chu for the tip. Update: As of right now, nothing very exciting is in the IE11 beta. You can get some of it through UI (Webkit's inspector tool), but not much of it. It's still entirely functional and works well. The biggest change in beta 4 is probably that downloads work again, if you happen to be stuck on one of the seven million Firefox download add-on blockers. (Seriously.) And the "New Tab" thing is a bit more attractive now. But, mostly, it's just more of the same, except with some tweaks to the CSS, and a new icon. I do not think IE11 is going to rock our world, to be honest. The biggest target markets for IE are developers, and outside of developing, what value would it bring? If you don't need Internet Explorer, why would you want to download it? I don't really need another email client and I'm not in the market for a new game console. If you do need IE, why download it? Use Microsoft Edge, which is built from the ground up to be a quality browser. The IE team is going to get chewed out for
