Keygen VNC  
Enterprise 502 64Q:

Question about the  
congruence

$$s \bmod \{m^k\} \equiv s$$

Given

$$m \in \mathbb{N}$$

and

$$s \in \mathbb{Z}$$

such that  $s$  is odd,

$$m^k \equiv s$$

---

$\pmod{m}$  for some  $k \geq 2$  Show that

$$m^2 \equiv s$$

$\pmod{m^k}$  My work so far: We know that  $m^k \equiv s$

$\pmod{m}$  so:

$$\begin{equation*} m^{2k} - s^2 \equiv 0 \pmod{m^k} \end{equation*}$$

$$\Leftrightarrow m^2 (m^k - s^2) \equiv 0 \pmod{m^k}$$

$$\Leftrightarrow m^2 (m^k - s^2) \equiv 0 \pmod{m}$$

$\end{equation*}$  And now I have no idea

---

how to continue from here. A: We have  $m^k = x$  where  $x$  is odd. For all  $n$ , we have  $x^n = m^{kn} = s \cdot m^k = s$  and  $s^2 \equiv s \cdot s \pmod{m^k}$ . Now multiply by  $m$  to get  $m^2 \equiv s^2 \pmod{m^k}$ .
