. rheumatic heart disease (cases per 1000) 0-30-81-01-81-32-23-55-7 357:439. . It includes active lipid deposition, inflammation, neoangiogenesis, etc. Vascular atherosclerosis (see also Chapter 4) usually affects the arteries that supply vital organs, particularly the heart and brain. Atherosclerosis usually develops already at the end of puberty, but may appear later in life. Due to this hereditary predisposition, most people become ill in adulthood. An excess of fats in the blood, which causes atherosclerosis, is usually created due to a violation of the metabolism of cholesterol in the liver and in other organs.
