## Error1309errorreadingfromfilepes2013

To determine efficiency, you need to know how to measure the input power of the device. Use the formula  $P=V*I$ . You can easily measure voltage. If you cannot measure voltage, use an ammeter. When you measure current consumption, you can use the formula  $I=P/U$ . To find the efficiency, divide the current by the output voltage. I.e:  $P/U=I$  As you can see, there are two physical steps to take in this formula. First, you measure how much current flows through the circuit, but without measuring the voltage to be connected to the circuit. And the second physical action is to measure the voltage.
