In this video, there is a question that is asking about computing the minimum number of recursive calls to determine if a binary tree is balanced. The question asks, "Is it true that if all the leaves of a binary tree are the same depth, then the tree is guaranteed to be balanced?" My question is: is this true? If so, what is the proof? A: Yes, it is true. The proof is simple. Let b_n be the number of levels in the tree with n nodes, and $S(n)$ the total number of balanced trees of size n . Then $b_n + S(n) = S(n-1)$. Adding up from $b_1 = 1$, we find $b_n = S(n-1) - S(n-1-n+1)$.

The easiest way to update the firmware is to run the Windows Update utility and let it check for a new driver or firmware update on its own. You'll have to enter your password each time it checks for updates. The best way to do this is to install a third-party software tool like DriverTuner. DriverTuner is free, and it does an excellent job of making sure you don't need to have a manually update the driver. Most people will do it at least once a month. However, if you've just downloaded a driver, just install it once. When you do install a new driver, you'll need to reboot your computer. DriverTuner will tell you if there are any bad consequences when you restart. Usually, there won't be. In the worst case, the driver may not have installed correctly. You'll need to reboot your computer a second time to finish installing the driver. Leave DriverTuner to handle the rest. When it's done, restart your computer and see if you have the latest drivers. In some cases, you may have to turn off auto-update in Windows Update to ensure DriverTuner gets the right driver. That's it! Once you have downloaded your new driver, you'll need to install it. In Windows, use a built-in utility called Device Manager, which allows you to see all of the devices recognized by your system, and the drivers associated with them. 5ec8ef588b
