The Apple Watch is a revolutionary multifunctional timepiece with a host of new health-related features; it comes with a heart rate monitor, blood pressure monitor and sleep app, among others. The watch features an electronic crown, digital crown and voice controls for interacting with the device. Developers are working on apps to extend the features of Apple Watch. Some apps have been released already, like Pedometer+ +, a physical-activity tracker, or Breathe, which helps you monitor your breathing while exercising.A few like these apps have reached completion, but Apple already indicated that a lot of more apps are already in development. The Watch will be able to connect to the iPhone, to keep track of the user's calls and messages, provide reminders and assist with notifications of the user's favorite contacts. Thanks, Watch notifies users about their calendar events, traffic hazards and more. The Apple Watch is a relatively new product, and it will hopefully be supported by a large number of applications, which can make it an 79a2804d6b
