SnapSO Web Browser Activator

SnapSO Web Browser is a handy and easy to use internet browser that enables you to surf the web, download files, watch movies and videos, listen to music, upload files and a lot of things that other browsers can basically do. History SnapSO Web Browser was initially developed for PC (Windows operating system), but in the time has been ported to Android and iOS (iPhone & iPad), and has become the only web browser available on these platforms. SnapSO Web Browser can be used to browse the web in different ways. You can choose which features you want to see, which are more important for you. Simple User Interface While SnapSO Web Browser has a very simple, clean and easy to use user interface, the most interesting aspect is that this simplicity is used to its advantage. For example, if you want to view pictures and videos, you will be able to do so by simply pressing the middle mouse button (or three fingers) on the current page and then pressing the menu key. SnapSO Web Browser has an automatic screenshot capturing tool so you can take a screen shot of the page you are on. Search SnapSO Web Browser has a search tool that allows you to search for a specific web page by using a keyword or a search engine. Not only will SnapSO Web Browser find

the search results for you (direct links to websites), but it will also offer to save these sites in a list of favorites that you can access at any time from the browser's main page. In the beginning of SnapSO Web Browser you can select from different options the search engine you want to use. The drop-down box is set by default to Google as the most popular search engine, however, you can change it to any of the supported search engines, such as Bing, Yahoo!, DuckDuckGo, and Yandex. 3D Touch

The latest operating systems of the iPhone and iPad support a 3D Touch, which allows you to access more than one feature at the same time. In SnapSO Web Browser this option is called Snap Scroll (3D Touch), which allows you to zoom in, scroll down, and drag the scroll bar, just by pressing on any web page. You can also use this option by pressing on the middle of any page to open a new window to make a call, or by pressing the middle of the address bar to show your current location.
