Is there a practical reason to use ref for structs in C#? A: In case your struct has some fields that are mutable (and you want to change them through code), you need to use ref or you'll have a compile error. A: There are a few cases where you need to use ref in a struct to explicitly pass it by reference. for example void AddOrUpdate(ref MyStruct s) { s = new MyStruct(); } Edit: MyStruct s; AddOrUpdate(ref s); can lead to a NullReferenceException at the call of AddOrUpdate if you pass it a struct that hasn't been initialised. Even though I don't know if there is a practical reason to use ref for structs there is at least a reason for them - C# is statically typed, so it has no reason to use ref if not necessary and if you use ref it at least shows

the intention to do so. A: If you are setting a value of a struct, then the most efficient way is to use ref. For example, suppose I create a variable named foo with a value of type Bar: Bar foo = new Bar(); But I want to
