I'll wrap up the review of Photohop, but I'll also mention the brand new Photoshop Lightroom 6 and its app: Adobe Photoshop Lightroom 6. I love this app. We know it from the 18-megapixel camera module in the iPhone, but Lightroom and Photoshop are more than I would ever expect. I'll break it down into 4 parts: 1.) a short review of the app itself, 2.) a detailed look at how to navigate the app and how the user interface could be improved, 3.) a look at the upgraded 5-band RAW processing philosophy in Lightroom 6, 4.) a look at Lightroom. It's important to note that I'm not a pro photographer, so take what I'm saying with a grain of salt. I am not talking about Photoshop Lightroom's very simple feature set or about the price, but about how the app will make you look at digital photography in a new way. Since Adobe brought this in-depth, hands-on look at Lightroom, I've seen it in action at a number of events. I've talked about how functionality increases the more you work with it, but I've also noticed that it's a powerful workflow program that takes a load of space on your computer, and you'll need to think about how much space you have available. Before using the Actions panel to create unique actions (or "recipes"), you need to save the action before making changes. Given that I've rarely used Lightroom without making changes and adding more actions, I'm going to say that's a good thing. I have been using Lightroom for 6 years now, and I am more comfortable with it than Photoshop. Lightroom has the Live Batch & Diff tool to do Split Toning, when one image is used to remove black and white values from another image in a picture. I also like Lightroom better than Photoshop because:

- It is easier to do advanced editing in Lightroom than in Photoshop
- It is easier to manage many images without having to duplicate them in Photoshop, just view them in Lightroom.
- It is easier to update a single image in Lightroom, just go to the & click the Update button.
- It is easier to create collections in Lightroom than in Photoshop.
- It is easier to correct lens errors in Lightroom than in Photoshop.
- Lightroom looks much better than Photoshop.

"The internet and professional photography has become democratized in the last decade and the spread of cameras, mobile devices, and cloud services such as Adobe's Creative Cloud is a great boon to creatives. The challenge is that the tools that democratized creativity are just that – tools. They aren't always the best fit for every use case. We have a lot of intelligent and hardworking people and are focused on helping you get the most out of your existing photography setup. So much of the learning, answering of questions, and ultimately the development of your photography is about sitting down and doing the work." There comes a time when we all need to move on and try something new. And that's ok, because there's nothing wrong with that. It's how we get to the work that is challenging and fulfilling. What we are trying to express here is that change is important and necessary. But within the change there is a challenge – a real challenge. Because for us, we have always believed that change has to be thoughtful and radical – and that is what we've built Lightroom and Camera. That's what we've built Photoshop for, and the rest of the Creative Cloud too. In the next related article called "Lightroom vs Photoshop", we will focus on what you can do to streamline and simplify your workflow, and get back to doing the most challenging work. Image masks are one of the most powerful tools in Photoshop. They provide a way to set specific areas of your image to be transparent. You can create an image mask by selecting an area of your photo and

hitting the 'the mask button' in the tool bar. Then you assign the area you wish to keep and the area you want to eliminate by adjusting the mask settings. 933d7f57e6

To do this, you can simply select the parts that you don't want to see and just create a transparent mask that blocks off the selection. You can also enlarge the mask to cover areas that were too small to capture first time. If you're a designer, and you want to make changes in the appearance or even a photo, it is mostly done via the tool, which is a Photoshop Brush. You can create a completely different appearance of any photo through it. It saves your time and also saves your creative budget. The special thing about it is that you can easily find and even combine different brushes to create a new appearance. Adobe is also announcing new features for Adobe Illustrator 24 later this year that will make creative work even more streamlined across Creative Cloud users from different disciplines. Depending on the type of project, users can use their favorite design software in a collaborative way for web, print, video and other media. Currently, there is an option to share Adobe Illustrator models with other desktop applications, but it is never as powerful as the shared model with Photoshop. With Adobe Sensei though, users can give their models a voice in real time with the ability to listen to audio commentary and see where in the design process decisions are coming from as they make their model move naturally from one direction to another. For instance, a model may have a decision about a font choice in the early stages of setting text. Graphic assets from Photoshop's groups or layers—such as patterns, gradients, palettes or brushes—can be shared just as easily with other designers, giving them new ideas about what they may want to use or what kind of feel they want for

their art direction. More features for Adobe Architecture, Adobe Captivate 7.5 and Adobe XD 13 are also in the works. Coming in 2016, Adobe Sensei-powered Illustrator and Design will open up shared models to the world of real-time collaboration, allowing Designers to share and edit alongside Architects or more than one Editor that has access to the same model, file or page. While Adobe XD is already available in the cloud for desktop as well as mobile, the collaboration features in Illustrator and Design for ARCHITECT and Design customers will make their product more powerful and secure. "Until now, a client model was the ideal in the Creative Suite, and one that was typically supplied with people's creative work," said Scott Saunders a product manager for Adobe XD. "But that's not the only way to share work, either within a team or between clients. Today, with the release of the next generation of Creative Suite, we're enabling the sharing of the highest quality creative work anywhere, across all devices and the web. "

"The world of design and technology is expanding at a pace that's becoming more and more understandable," said Andrzej Chmielinski, senior vice president of desktop products at Adobe. "Adobe is committed to being the company that moves Photoshop into a new era, creating powerful tools to meet the complexity and diversity of our work, and the potential of the technology that powers them." Adobe InDesign CS6 brings the design goodness of Adobe Photoshop into the collaborative design process. The workflow is tightly integrated with InDesign, leveraging the power of digital tools to create a single design space. You can now work on the entire design process from a single interface, and share your work with clients, colleagues, and other designers. Today's announcements follow on from some of the recent collaborations with major technology companies, including expanding the integration of innovative technologies like Adobe Sensei with Photoshop and releasing new versions of certain Creative Cloud applications for new operating systems such as JavaScript in 2019 for Photoshop and Elements, and Web-based apps for Photoshop and Premiere Pro. During MAX this year, Adobe also announced the launch of DesignShare for Photoshop — the industry's first file-sharing tool for designers, enabling them to collaborate and share work with greater ease within their organizations. Adobe recently announced the general availability of Photoshop creative cloud. It is a service from Adobe that allows you to access all Adobe software and content from anywhere. With this you can access all of your creative goods and services online. You can pay as you go or choose a subscription plan. You get all the updates with no additional costs. With the help of Photoshop cc you can create your designs with the tools that you need. You can share your creative work with others. You can create a logo, product, brochure, flyer, magazine cover, or any other type of print and digital media.
