The safety of bisphosphonates, such as pamidronate and alendronate, is well established in patients with high risk of osteoporosis and cancer. When these agents are administered to patients with controlled risk factors, the incidence of adverse effects, such as bone necrosis of the jaws, is less than 1%. Despite many patients receiving an oral bisphosphonate, jaw necrosis occurs in only 3 to 5 out of every 100,000 patients. Thus, there is no need to delay the administration of oral bisphosphonates to patients with high risk factors for osteoporosis until the drug's toxicity is established. However, if bisphosphonate-associated osteonecrosis of the jaws (ONJ) occurs, dentists must be aware of the diagnosis and its treatment. We reviewed the literature

What's new Version 2.9 - Feb. 25, 2014

1. Fixed the bug that caused the virtual disk not to mount after a reboot of the computer.
2. Minor bug fixes.
3. Improved performance.

The description provided by the software developer This free software program is provided free of charge for both academic and commercial uses. It has a very simple interface and is quite easy to use. Virtual Disk Utility is designed to create, mount and unmount virtual disks in KVD format. Its interface is based on a wizard-like structure. In step 1 of the wizard you can create a new virtual disk. The disk can be encrypted, so that you can password protect the disk. The program supports mounting a virtual disk, mounting it to a specified location and then disconnecting it. Changes to the virtual disk are applied immediately to the system. You can create as many virtual disks as you want. Unfortunately, you cannot specify a custom size. As this is automatically applied depending on the size of your hard disk, there are a few limitations. You can easily move between disks with a button, and the program supports right clicking on a virtual disk to unmount it. If you disconnect a virtual disk, the current disk is automatically opened. The unmounting process does not need to be done manually; it is possible by right-clicking on the disk and clicking the "Un
