Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC.

Regards! Sren Easy for most. Easy for users who are inexperienced at postprocessing. A very savory task with Adobe's new Photoshop Master Collection. The program is picky. Preferably stick to one format (DNG, JPG, etc.) to avoid problems. Master Collection requires you to have Adobe Watercolor, Photoshop, or Photoshop CC 2019.

<https://forums.adobe.com/thread/2163214> Multilayer tags In Photoshop as soon as you open a file, you can double click on ANY type of layer to give it a name. If there is a layer already with the same name, Photoshop will ask you to select a new name for that layer (also, it will ask if you want to revert to the original layer you've been working on). Once you select a new name for a layer, it will tag that layer in a special panel called Tags & Layers. You can organize your layers in the Tags & Layers panel by creating collections for each type of layer (Curves, Gradients, Patterns, Texture Maps, Shapes, Text, etc.) and sorting and searching for layers inside your collections. You can also sort the order that the layers will appear in your layers panel. Instead of starting a new file in your working Photoshop document, it is now possible to create a new document directly in your working instance of Photoshop. A new document will appear in your file panel, ready to be manipulated. New documents can also be imported and exported from Photoshop. Photoshop also features a powerful and stable set of tools for creating images for the web. Saving from Photoshop to the web now provides a realtime preview and console log for troubleshooting your web files. Saving for the web is available from any editing path and any output settings, resulting in a final web file that can be instantly previewed in many browsers. Saving for web is compatible with web safe color spaces, filters and transitions.
