When the Adobe Creative Suite was launched in 1998 in its first version, you could draw something on a computer after you shot a photograph, and manipulate it in Photoshop. At the time, software like this was far out of reach for the average consumer. Technology was still in its infancy then, yet Photoshop, Lightroom, and an assortment of other applications like them were powerful enough to open creative doors for photographers, and they've been a part of the photographic workflow ever since. As said before, the newest version of Adobe Photoshop is definitely worth a look. Whether the latest version is worth the price you have to pay, that I'll leave to you. But if you do decide to give it a try, be sure to keep in mind that it may not run as fast and smoothly as other programs. Besides, of course, that it lacks some of the advanced features of other programs. All in all, though, Photoshop is still the best at what it does - and all other programs should take a look at what it can do.

In theory, as long as you have a defined workflow and your HD is not full, Lightroom should be enough for you. The main differences are that Lightroom is full screen designed for working inside and is a more "social" system than Photoshop where you need to sign up for a free trial to access features. Photoshop has more features and Photoshop's web-based architecture makes it a lot easier to access from home/work. In practice, it's easy enough to bridge the two, and you can use both on the same projects before and after editing is done. e3d0a04c9c
